

Kendo osTicket Template v.1

Based on Osticket v1.9.12

Kendo is a responsive template based on Bootstrap framework. This provides a complete makeover of the client section of the osTicket install. The /scp backend is not modified.

Install Directions

Please check the osTicket wiki page for the install and setup documentation.

Customizing Kendo template

The design can be customized by editing the theme.css file. Please find the template css file on file path

../upload/assets/kendo/css/theme.css

There is also a theme.less file included which you can use for customization.

../upload/assets/kendo/css/theme.less

Changing the logo

Open the file path

../upload/assets/kendo/images

and replace the logo.png file with your logo image.

Change the site background

Open the file path

../upload/assets/kendo/images

and replace the body.jpg file with any other image of your choice.

Customize the Footer section

The footer section includes 3 columns where you can display your business details, contact details, social media links, other important links etc. To customize these details open the footer.inc.php file on the path below and edit the details.

../upload/include/client/footer.inc.php

1. Address column

The first column in the footer section displays your business address. You can customize it on the footer.inc.php file.

2. Important links

The second column is a customizable list of links. You can customize it to showcase a list of important links.

3. Contact details

The last column hold the contact details like, email and phone number. The section also features few social media icons that can be configured to display your social media presence.

You can find the HTML code for the social media icons list. Replace the **"#"** of each social media item with your own social media url.
